

Iwuji Anthony

My interest is to pursue and develop a professional career in a dynamic and forward looking organization. And equally open to collaboration with like minds in building state of the art technology aimed at improving the quality of life in general.

EXPERIENCE

Tech4Dev, Lagos — Technical Lead March 2021- Present

Project One: Internal application

- Lead a team that built an internal application currently in use at the organisation.
- The application consists of three users (staff, admin, and non-registered users). The staff have four different interfaces based on departments. That is programs, talent, partnership and communications.
- The application equally contains a meeting chat, which will enable us to track all events.
- Technologies used are: node js, express framework, postgresql, react, socket.io, WebRTC, html, css and Azure for deployment, Git and Github, Github action for CI/CD.

Project Two: Mentorship Platform

- My team is currently building a mentorship platform for my organisation(75% complete at point of writing). The platform is meant to link mentees to mentors. It has Three users: mentor, mentee, and Admin.
- The Admin reviews and approves mentors that enroles in the platform.
- Technologies used: node js, express framework, postgresql, react, html, css and Azure for deployment, Git and Github, Github action for CI/CD.

Mercator Technologies,Lagos — Software Engineer

Project One: PavilionPOS Web Application

- This project was built for one of the Nigeria Banks. Which they use internally to monitor their POS terminal all over Nigeria. The app consists of various chats for analysing the distribution of merchants and their POS terminals all over Nigeria.
- It is equally used for reconciliation in payment. Tracking transactions and creating accounts for new terminals or merchants.
- I was responsible for the front end. Building ui and consuming api from the backend.
- Technologies used: Angular, HTML, CSS, Asp.Net core, mysql

Project Two: TruckPark Web App

- This project was built for Lagos State government. It is use to keep inventory of lorries that enters and leaves the park
- I was among the team that implemented the frontend.
- Technologies: Angular, HTML, CSS, Asp.Net core, mysql

Decagon software Engineering Institute, Lagos — Software Engineer

october 2019 - 2020

Project One: PrepClass Application

- This is a paid Learning Management System where students, on payment, are linked to a class room where they can always attend classes. A teacher is merged to a given class. And every activity is monitored by admin and CRM.
- Technologies: Firebase store, Node js , Express, React, Zoho, Agola
- I was among the team that built the API. Api for registering users and persisting data. I equally designed the registration screens.

Project Two: Wallet App

- This application is a wallet system that allows users to store credit, send credit to others. Users can have more than one account of different denominations. There are three types of users: noob, elit, and admin. Elit users can carry out debit without Admin approval. All debit from noob users must be approved by the admin.
- I built both the backend API and the frontend.
- Technologies: react js, node js, express framework, postgresql, react, html, css and heroku for deployment, Git and Github, Github action for CI/CD.
